About Me

I am a passionate developer, who always wants to improve. Since graduating, I have gone leaps and bounds with my ability to design solutions and implement them, with a wide variety of technologies. In the future, I hope to keep improving my arsenal and becoming the best developer I can.

EXPERIENCE

Keyzo IT Solutions, Hull/Kirmington - *Junior Software Developer*

June 2019 - PRESENT

- **JS:** Using both ES5/ES6 in our web application and mobile application, I have built a strong fundamental understanding of the language, and only want to keep on expanding on this.
- **React:** With a big push to try to get as much as our frontend moved to react, in my own time I have studied/learnt the framework and keep continuing to do so, to reach my goals as a developer and the company's goals.
- **Node:** Building microservices, since joining I have worked on existing microservices and have created my own which interacts with an SFTP server and AWS services.
- **AWS:** Using mainly SQS/Lambda/S3 to design serverless solutions so that microservices are able to communicate with our backend.
- **PHP(Symfony 3):** Building multiple Restful APIs, for our web application, also learning the MVC design pattern along the way
- **SQL:** The database we use is an Oracle DB, where I have learnt SQL to get/put/delete and update data in tables.
- **Cordova:** Using cordova to make an ipad application, with an SQLite database. Also using multiple plugins on the application.

Projects

- **dreadedvegan.co.uk:** A website, where I plan to build my personal blog based around sports/cooking and other topics. I plan to build this using React/GraphQL to further improve my react skills and to learn the basics of GraphQL

EDUCATION

University of Hull - *Computer Science(BA Hons)*

September 2016 - May 2019

- **Swift/Xcode:** For my dissertation, I had built an iphone app to find parking spaces, this taught me the fundamental basics for using Xcode and swift
 - Using google firebase as a database
 - Using a restful api made with python/flask
- Other modules include:
 - Networking - C#
 - Advanced programming(data structure and algorithms) - C++
 - 2D Graphics - JS/HTML/CSS
 - Database Designs
 - Web information & technologies - PHP/SQL

Other's

- Sports
 - Basketball
 - Team captain in my final year, where we won the league
 - Have competed at a BUCS level
 - American Football
 - A team sport, which requires a lot of communication, and is a physical challenge, which I thoroughly enjoy
 - Running
 - I thoroughly enjoy running, and do it 4 to 5 times a week. I am currently training to run a sub 20minute 5k
