Trading, Sports, Cooking

EXPERIENCE

Keyzo IT Solutions

June 2019 - Present

FullStack Software Developer

- Modernizing our main web application to use more technologies such as React and more modern practices such as ES6. Whilst doing technical debt along the way to improve future productivity.
- Collaborating with senior developers and directors to push numerous new features for existing /on-boarding customers.
- Teaming up with IT Support to quickly identify bug causes in production and aid in creating of tickets in JIRA.
- Creating multiple RESTful APIs using symfony, and building upon existing API's using OOP.
- Building numerous node micro-services from start to finish for bespoke customer requests and developing them to be flexible for all customers.

PROJECTS

isaactennant.com - A simple static website built using create-react-app to understand the concept of components and the basics of react

monzo-money-tracker: A react/typescript webapplication which displays my bank transactions using Chart.js to help me keep track of my spending habits

arsenal-transfer-tracker: A ruby web scraper which would scrape the arsenal website for news of any new signings or contract extensions and would send me a text message using the twilio API
