# Isaac Tennant

## Software Developer

39 Grammar School Yard Hull, HU1 1SE 07565517992 isaac0798@gmail.com

#### **SKILLS**

**JS:** Using both ES5/ES6 in our web application and mobile application, I have built a strong fundamental understanding of the language, and only want to keep on expanding on this.

**React:** With a big push to try to get as much as our frontend moved to react, in my own time I have studied/learnt the framework and keep continuing to do so, to reach my goals as a developer and the company's goals.

**Node:** Building microservices, since joining I have worked on existing microservices and have created my own which interacts with an SFTP server and AWS services.

**AWS:** Using mainly SQS/Lambda/S3 to design serverless solutions so that microservices are able to communicate with our backend.

**PHP(Symfony 3):** The majority of our backend is in PHP, using symfony 3 helped me get a strong grasp of the MVC design pattern and building restful API's.

**SQL:** The database we use is an Oracle DB, where I have learnt SQL to get/put/delete and update data in tables. I have also worked with SQLite.

**Cordova:** Having an application made for an iPad came with its challenges, of different generations so therefore sizes and orientation, really helping to improve my understanding of html/css.

**Swift/Xcode:** For my dissertation, I had built an iphone app to find parking spaces, this taught me the fundamental basics for using Xcode and swift

**Git/Bitbucket:** Over time, I have gotten proficient using git as a version control system

#### **EXPERIENCE**

**Keyzo IT Solutions, Hull/Kirmington** - Junior Software Developer

June 2019 - PRESENT

- Learning and implementing React when possible
- Building microservices with node is and deploying with pm2
- Building restful APIs in Symfony
- Using cordova to work on our mobile application

### **Projects**

 dreadedvegan.co.uk: A website I have high hopes for, which im wanting to build a blog for recipes/sports/general using graphQL/React

#### **EDUCATION**

**University of Hull** - Computer Science(BA Hons)

September 2016 - May 2019

- Final year project was building a mobile application using swift, a restful api using python and google firebase
- Other modules include:
  - Networking C#
  - o Advanced programming(data structure and algorithms) C++
  - o 2D Graphics JS/HTML/CSS
  - o Database Designs
  - o Web information & technologies PHP/SQL
